SELECTED PROJECTS

WindSinger | Breath-Sensing Interaction Prototype

PolyU team project | Hardware Research & Design Lead and Co-PM | Sep 2026 - Present

- Research breath sensing and airflow for a handheld prototype. Review sensor placement, tubing interfaces, enclosure fit and 3D-printing constraints with hardware teammates.
- As one of four co-PMs on a 27-person project, lead the hardware workstream, discuss prototype options and scope with the other PMs, and coordinate handoffs to the game and app teams.
- Coordinate hardware-game bench testing. Track Bluetooth and signal issues alongside tubing and shell-fit revisions, and use the findings to set priorities for the next prototype.
- Collaborate with the research and app workstreams on an at-home practice concept informed by team clinician interviews, including clearer pacing cues and reviewable practice records.

Windborne | Head-Controlled 3D Game

PolyU Programming coursework | TypeScript, Three.js, MediaPipe

- Built a browser game with calibrated head-motion input and a keyboard fallback. Revised the feedback cues after a peer playtest and added checks for tracking recovery and input timing.

COMMUNITY DESIGN EXPERIENCE

Design Intern | Tongxing Care and Aid Centre

Minhang, Shanghai | Jun 2025 - Sep 2025

- Designed a community-house interior for autistic community members and contributed to the early design of an art exhibition.

EDUCATION

Nanjing University Expected Jun 2028
Master's in Architecture, Architecture and Urban Design

The Hong Kong Polytechnic University Expected Jun 2027
MSc in Innovative Multimedia Entertainment (dual-degree programme)

Beijing University of Civil Engineering and Architecture Jun 2025
Bachelor of Architecture, Urban Design concentration | GPA 3.87 | Ranked 2nd of 49

SKILLS

Design and prototyping Rhino, Grasshopper, Blender, Figma, sensor prototyping and bench testing

Programming and languages Python, TypeScript | English (IELTS 7.0), Japanese (JLPT N1)
